

## Mathematical Questions and Solutions Volume 67

Filesize: 1.64 MB

### ***Reviews***

*This book will never be straightforward to start on looking at but extremely exciting to read. I actually have read through and that i am sure that i am going to gonna go through once more again in the future. I am happy to explain how this is the very best book i have read through in my individual lifestyle and may be he best publication for at any time.*

To read **Mathematical Questions and Solutions Volume 67** PDF, make sure you click the web link listed below and download the file or gain access to additional information that are have conjunction with MATHEMATICAL QUESTIONS AND SOLUTIONS VOLUME 67 ebook.

Not Avail, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1897 Excerpt: .(P-W. Flood.)--Euler says it would be difficult to find  $x$  so as to make  $p-2pV + x + x a$  square; but show that it is not difficult. 13361. (W. C. Stanham.)--Construct (a) a right-angled triangle having its angular points on the given rectangular hyperbola  $xi-y^2 = d^2$  (rectangular coordinates), and its centroid at the point  $(J- \cos, a \tan )$ ,  $f$  being any given angle; and show (b) that, both in this case and in the case in which the centroid is to be at the point  $( - \sec p, -Ja \cot f)$ , the determination of the coordinates of the angular points of one such triangle will not necessitate the solution of an equation of a degree higher than the second. Solution by the Proposer, Professor Radhakrishnan, and others. Let  $G$  be the point  $(iJCOS(f, -\tan(f), \text{ or } (jy y)$ , and let  $CG = r$  and  $L GCA = 29$ . (a) Draw  $CP$  to the curve, bisecting  $GCA$ ;  $CO$  at right angles to  $CP$ , meeting  $PG$  in  $O$ ; and  $QOR$  parallel to the diameter conjugate to  $CO$ . Then  $PQR$  is the triangle required. For  $OR^2 = OQ^2 = CO^2 + CP^2 = OP^2$ , since conjugate diameters (sic) are equal, and diameters at right angles Note on Quest. 5517. By H. W. Cuejel, M.A. The Solution to this Question on page 25 of Vol. Lx. is evidently wrong,  $OP$  being the semi-diameter down which a particle will fall in the same time as down  $OA$ ....
