Basically no phrases to clarify. It really is written in straightforward phrases rather than hard to understand. You will not sense monotony at any moment of your own time (that's what catalogues are for concerning if you ask me).

Culicidae Press, LLC, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****. This book is written to help both current runners-and those who want to become a runner-learn how to run more smoothly, more efficiently, and for longer periods of time without injury. We wanted to get rid of the painful early sessions that go with learning to run the traditional way (I used to hate running when I first started). We feel there is no need to pound the pavement or feel all beat up after a run (muscle soreness and hard work are OK, feeling beat up is not). Here is what we are going to cover in this book: 1. Screening for Potential Injuries Before You Start 2. Biomechanics: learning good technique always beats getting stronger. This is the main argument of the book. 3. The Key Points that make up the Grab N Go system: - Five parts of running: - Symmetry of arms and legs; - Posture for ergonomics-this is important. - Master these areas before putting more time into anything else. It may take a bit longer to learn but pays off in the long run (pun intended). - We include the appropriate strength and coordination drills for each section, as you need a certain level of strength in order to perform each technique correctly. 4. Build the Machine 5. Speed or Distance? This seems to be the big conundrum for runners. I know I used to think that it was an either/or choice. You were either a distance runner or one of the speed guys. I now realize that this is no longer true. With a little planning it is possible to work on both parameters as they each have their...
